

GW System Materials

Materials in the SLP System 1. All materials used are to SABS approved standards.

2. Where possible recycled materials are an option and can be used.
3. All parts are easily accessible to allow for regular checking and maintenance.
4. Our filtration system provides for the removal of coarse debris and finer particles such as hair and soap build up.
5. Our system has been designed to prevent the possibility of blockages, leakages.
6. Our storage unit has an overflow valve back into the mains sewer/septic tank in the case of electrical failure or overload.
7. There are access points available in our system to allow for clearing of blockages.
8. The system is constructed with ventilation points to prevent the accumulation of foul air.
