

## Consulting & Auditing

### Professional Services

We have a team of industry specialists to provide complete and functional consulting services in all areas of renewable energy and energy efficiency. Utilising the latest technologies and processes and experience gained in the hands-on deployment of projects SLP can provide extensive reports to help our clients make informed and optimally suited decisions for their renewable/sustainable projects.

An integral portion of the auditing process is analysing the impact a client's projects make on our planet. SLP offers practical assistance and solutions to industry and individuals wanting to understand and reduce their greenhouse gas emissions by calculating the carbon footprint of the entity and giving solutions to either off-set or reducing the carbon total.
